SUMMARY

Technical Director candidate with experience in Maya scripting, Python tools, Unity/Unreal workflows, and production-style asset pipelines. Animation Pipeline Experience: Familiar with asset workflows, rigging, animation, procedural scripting, FBX imports/exports, and lighting/rendering concepts in production-style environments. Enthusiastic about identifying a problem, writing code that integrates into studio pipelines, and iterating with end-users.

EDUCATION

DePaul University, Chicago

BFA Animation + BS Computer Science + Minor in Data Science, Illustration

GPA : 3.96

Technical: Python, Java, C, C++, JavaScript

Tools: Jira, Git, Unreal Engine, Adobe Suite, Maya, Advanced Skeleton, Unity, Blender.

Specializations: Pipeline automation, tool development, asset workflows, debugging

WORK EXPERIENCE

DIGI(DePaul Instructional Game & Innovation) DePaul

Chicago

Game Designer and Developer

July 2024 – Nov 2025

- Developed tools, interactive systems, and 3D workflows for VR/AR educational projects in Unity and Twine.
- Debugged and optimized pipelines for asset imports, interactive sequences, and runtime performance.
- Collaborated with designers, faculty, and engineers to support production needs and technical problem-solving.

Center for Development of Advanced Computing (C-DAC)

India

Digital Twin Development Intern

July 2023 - Sep 2023

- Built a digital twin system integrating hardware + real-time 3D visualization using C++, Python, JavaScript, and C#.
- Designed workflows for data transfer, asset synchronization, and interactive tool behavior between physical and virtual systems.
- Contributed technical solutions that helped the team secure an \$800K Digital Twin contract.

Obioma Fashion

Chicago

Technical Artist (3D Assets & Pipelines)

Feb 2026 - Present

- “Created and managed 3D assets and looping animations in Maya and Blender; supported asset workflows for commercial and narrative projects.

TD PROJECTS

3D Animation Demo Reel ([Character Animation Reel](#))

2025

- Created a demo reel showcasing strong character animation made in Maya, rendered, lit, and edited.
- Also self directed a fully 3D animated film, breaking down complex projects into smaller segments and accomplishing tasks within set timelines and deadlines.

City Generator Maya Tool

2025

- Developed a procedural city-generation tool in Maya using Python, automating asset placement, layout logic, and modular block generation. Reduced manual setup time by 80%.
- Reduced manual layout work for background city shots and enabled rapid iteration for lighting and camera tests

VR Escape Room

2024

- Developed a VR Escape Room using C# in Unity for user behavior research in VR integrating traditional and unique puzzles, enhancing user engagement by 50%.
- Used Git for version control across multi-person projects, integrating asset and code pipelines.
- Built a VR puzzle workflow in Unity using advanced C# scripting, optimizing performance by 40% and integrating artist-friendly control scripts.

TD PROJECTS

Interactive 3D Portfolio (React/WebGL) | *React, Vite, Three.js, Tailwind CSS, React Router, GLB assets*

2025

- Engineered a real-time WebGL 3D system using React Three Fiber and Three.js, architecting modular scene logic with GLB assets
- Optimized scene preloading, Vite asset inclusion rules, and lightweight shaders/materials, reducing initial payload and GPU cost.
- Built a deterministic loading and scene state pipeline, including a custom Loader and UX feedback loop, ensuring consistent behavior across devices and network conditions and went through iterations via with Git/GitHub collaboration.

Chem Mini Games App

2024

- Developed interactive chemistry mini-games in Unity using C#, enhancing student engagement and improving test scores by 12%.
- Designed a curriculum-aligned, user-friendly interface, receiving positive feedback from 85% of teachers in beta testing.

FairFit– Sustainable Shopping (Django) | *Python, Django, SQLite, Docker, Docker Compose, Selenium*

2025

- Built a full-stack Django web application ecommerce platform to give 50% better access to sustainable fashion.
- Collaborated in a 4-person Agile team using Git branching and code reviews, delivering incremental features each sprint.
